

**DLD Approval Criteria G 4:** Course architecture permitting the addition of content, activities, and assessments to extend learning opportunities, as needed.

**Screen shot of Demo Course (PED201)** (Learning Units > Unit 1)

ALL teachers have the ability to turn-on the “Edit Mode” inside the course and utilize the controls in the LMS.

Instructors have the ability to make additions to the content inside the Blackboard LMS. They can add, to the base curriculum and delete items too.

The original course—the one that is copied FROM, is left unaffected.

The image shows a screenshot of the Blackboard LMS interface. At the top, a banner reads "Edit Mode is: ON" with a toggle switch. A blue box on the right explains that turning on Edit Mode opens controls to create content, assessments, tools, and more. Below this, the main course page for "Unit 1: Medical Background" is shown. A red box highlights the "Build Content" menu, which includes options like "Item", "File", "Audio", "Image", "Video", "URL", "Learning Module", "Lesson Plan", "Class Outline", "Class Link", "Content Package (IMS)", "Content Package (NLN)", and "Content Package (SCORM)". A blue box at the bottom right notes that there are two different people who teach this course, and in this example, the instructor "Tanya" added a personalized instructional video. A blue arrow points from this text to a video link in the activity list.

Turning-on the “Edit Mode” opens **controls to create content, assessments, tools and more**

There are two different people who teach this course. In this example, the instructor “Tanya” added a personalized instructional video.

Day	Activity
